

FUSIONFORM DESKTOP™

OVERVIEW

FusionForm Desktop is an innovative, new product that captures and transforms handwritten data into digital data that is easily integrated into EMR (Electronic Medical Records) systems. Healthcare professionals can capture patient information in a natural and familiar manner and still satisfy the healthcare industry's need for digital data.

Using a digital pen, desktop software and their own medical forms printed on digital paper, healthcare professionals can instantly turn their free-form clinical notes, diagnoses, prescriptions, and test requisitions into digital data. With a simple interface for the user to instantly view and verify the digital results of handwriting recognition, FusionForm Desktop provides the accessibility of pen and paper and the verified data integrity high quality healthcare requires.

KEY BENEFITS

Don't Change The Way You Work

FusionForm Desktop works just like you do—with a pen and paper. As you write, FusionForm Desktop captures your handwriting and hand-drawn sketches and seamlessly transforms them into digital records ready for an EMR environment.

Instant ROI

FusionForm Desktop requires minimal training and quickly provides return on investment. With FusionForm Desktop you eliminate costly and time-consuming steps like scanning and transcription, accelerating your workflow and making your patient information processes more efficient.

On-The-Spot Verification of Data

Recent studies have reported that over 15% of patient records contain errors. This is dangerous to patients and a source of tremendous liability to healthcare professionals and institutions. FusionForm Desktop provides on-the-spot verification capability such that patient information can be verified at the time of capture.

Anything You Write or Draw Can Be Part of an EMR

For the first time anything you can write or draw can become part of an electronic medical record. FusionForm Desktop allows healthcare professionals of all specialties to use personal notes, patient consultations, handwritten physician orders, sketches and drawings and include them all in digital patient records.

Interactive Patient Records

It's not enough just to capture information and transform it into digital patient records. FusionForm Desktop provides healthcare professionals the capability to interface to a range of third party EMR systems, allowing you access to archived electronic patient records.

No Lost Productivity

With FusionForm Desktop you see as many patients as you always do, with no loss of time or productivity because you don't change your work routine. FusionForm Desktop converts your handwriting to digital patient records automatically and effortlessly.

KEY FEATURES

- Departmental forms automation made easy
- Multiple healthcare users can contribute to a single form
- Desktop software can be easily integrated with healthcare EMRs and commercial databases
- Electronic forms images can be shared with others as "view only"
- Flexibility to incorporate existing workflow processes
- FusionForm allows users to select the level of forms automation they need based on the stage of technology deployment they have
- Unique dot pattern "fingerprints" improve patient safety, reduce liability, enhance data integrity and eliminate duplicate records

ABOUT SATORI LABS

Founded in 2003, Satori Labs, Inc. is a leader in forms automation solutions. Satori Labs fuses digital pen and paper, mobile and wireless technologies with Satori Labs' high-performance forms automation software to create the next generation of connected information management products for the mobile professional.
