

# FUSIONFORM MOBILE™

## OVERVIEW

FusionForm Mobile is an innovative, new product that recognizes and captures handwritten information from customized medical forms and instantly transfers it into a PDA as digital data. Once in the FusionForm enabled PDA, this information is easily transmitted into an Electronic Medical Record (EMR) or other back-end database archive. Home health-care workers and other field professionals can seamlessly enter data into a digital system using a familiar pen and paper format—without dictating, transcribing or keyboarding.

By using FusionForm Mobile, a digital pen, and their own forms printed on digital paper, mobile clinicians can easily and automatically convert free-form clinical notes, sketches, diagnoses, prescriptions or any other handwritten material into electronic data. A simple interface allows users to verify data at the point of entry on a PDA, and then either store it or wirelessly transmit it to a back-end system.

## KEY BENEFITS

### Don't Change The Way You Work

FusionForm Mobile works just like you do—with a pen and paper. As you write, FusionForm Mobile captures your handwritten notes, drawings and any other information and easily converts it into digital data ready for an EMR or archive environment.

### Instant ROI

With FusionForm Mobile you eliminate time-consuming steps like scanning and transcription, accelerating your workflow and making your patient information processes more efficient.

### On-The-Spot Verification of Data

Lost or inaccurate patient records are dangerous for patients and a source of considerable expense to healthcare institutions. FusionForm Mobile provides on-the-spot, instant transfer so the clinician can verify information at the time of capture and immediately transmit it to a back-end system or store it for later wireless transmission.

### Anything You Write or Draw Can Be Part of an EMR

For the first time anything you can write or draw can become part of an electronic medical record. FusionForm Desktop allows healthcare professionals of all specialties to digitize personal notes, patient consultations, handwritten physician orders, sketches and drawings and include them all in digital patient records.

### Interactive Patient Records

It's not enough just to capture information and transform it into digital patient records. FusionForm Desktop provides healthcare professionals the capability to interface to a range of third party EMR systems, allowing access to archived electronic patient records.

### Stairstep Functionality

The FusionForm solution allows you to apply technology as you need it. Phase in additional FusionForm benefits when you are ready. You'll never outgrow your original investment because the handwriting recognition and data interactivity of the product grow with you.

## KEY FEATURES

- Offers users true mobility when capturing client information
- Departmental forms automation made easy
- Flexibility to incorporate existing workflow processes
- FusionForm product family offers users stairstep functionality

## ABOUT SATORI LABS

Founded in 2003, Satori Labs, Inc. is a leader in forms automation solutions. Satori Labs fuses digital pen and paper, mobile and wireless technologies with Satori Labs' high-performance forms automation software to create the next generation of connected information management products for the mobile professional.
